Associate in Arts (A.A.)

Anthropology Emphasis – Part-Time Advising Guide

Anthropology is the study of humans in the present and the past. Within the field of anthropology, there are four specialties - cultural anthropologists intensively and comparatively study human cultures throughout the world; physical anthropologists study the biological complexities of human development and structure; linguistic anthropologists study the development, structure and social uses for human communication; and archaeologists investigate the remains of past societies. Most careers in anthropology come from the domain of applied anthropology, which takes the theories and knowledge of the field and applies them to real world problems. The interdisciplinary nature of anthropology crosses into related fields of sociology, biology, economics, political science, geology, and history. Our anthropology program is built around the Associate in Arts (AA) degree. This degree gives you a solid two-year background in general education courses that can transfer to a four-year institution.
