Associate in Arts (A.A.) Geology Emphasis – Advising Guide

Geologists study the earth to better understand its history, composition and structure. Within the geology field, there are different areas of focus - mineralogists who study rocks, minerals and stones; paleontologists who determine what the earth was like during prehistoric times; and ecologists who strive to protect the environment are just a few. MCC offers a range of geology electives to choose from including: physical geology, environment and oceanography. Our geology program is built around the Associate in Arts (AA) degree. This degree gives you a solid background in general education courses that can transfer to a four-year institution. It also allows 17 hours of elective courses that let you focus on your geology interests.
